OVERVIEW

Global economic and financial developments

Latest international developments indicate a brighter global economic outlook in the wake of growing COVID-19 vaccine coverage and additional fiscal stimulus measures in some large economies. Nonetheless, heightened uncertainty continues to persist amid the emergence of new virus variants and divergent recovery speeds across countries. In this respect, some advanced economies, notably the US and UK, are showing signs of recovery primarily due to vaccine deployment, while emerging market economies specifically India and Brazil, are struggling in their fight against the COVID-19 pandemic as they continue to register record-high new cases of infections.

According to the United Nation's World Economic Situation and Prospects mid-2021 report, the global economy is projected to expand by 5.4 per cent in 2021 - higher than its January 2021 forecast of 4.7 per cent - and by 4.1 per cent in 2022. The upward revision mainly reflects rapid vaccination rollouts, strong growth outlook in the two largest economies namely US and China as well as the robust recovery in global trade. Developed and developing economies are expected to grow by 5.0 per cent and 6.1 per cent, respectively, in 2021. Nonetheless, the outlook for countries in South Asia, Sub-Saharan Africa and Latin America remains fragile. In parallel, global trade data indicate a strong but uneven recovery. Global trade in goods and services is estimated to grow by 9.4 per cent in 2021 and by 5.7 per cent in 2022, underpinned by rising merchandise trade which has surpassed its pre-pandemic level. However, trade in services, particularly tourism, remains subdued due to restrictions on international travel. The main challenge to global economic recovery remains the timely and universal access to COVID-19 vaccination.

Major central banks continued to maintain their accommodative monetary policy stance. At its Federal Open Market Committee meeting ended 28 April 2021, the US Federal Reserve (US Fed) maintained the federal funds rate at the target range of 0.00 to 0.25 per cent. The US Fed indicated that it would continue net asset purchases to the tune of US\$120 billion per month. The US Fed noted that economic activity and employment had picked up as a result of considerable policy support and quick vaccine rollout, and that the increase in US inflation was due to temporary factors. At its Governing Council meeting of 22 April 2021, the European Central Bank kept the interest rates on its deposit facility, main refinancing operations and marginal lending facility at

-0.50 per cent, 0.00 per cent and 0.25 per cent, respectively. Net asset purchases under the Pandemic Emergency Purchase Programme would be maintained until at least end of March 2022. The Bank of England (BoE) maintained the Bank Rate at 0.1 per cent at its meeting held on 5 May 2021. The BoE noted that progress in vaccination rates were supporting UK economic recovery and that inflation might reach the 2 per cent target in 2021.

In April 2021, the US dollar depreciated against the euro but appreciated slightly against the Pound sterling on a monthly average basis. The US dollar registered a downtrend for most of the month as US Treasury yields dropped to a one-month low and investors shifted their funds from the US dollar to other riskier assets. The euro traded at an average of US\$1.1951 in April 2021 compared to an average of US\$1.1905 a month earlier. The euro started the month at a low of US\$1.1715 but thereafter benefitted from the weakness of the US dollar to reach an intra-month high US\$1.2134 on 29 April 2021. The Pound sterling traded at an average of US\$1.3844 in April 2021 compared to US\$1.3848 in March 2021. The sterling dropped to an intra-month low of US\$1.3673 on 12 April 2021 before rebounding and ending the month at US\$1.3940 upon the release of improved UK economic data.

Stock markets continued to gain ground amidst positive earnings registered by corporates, specifically in the technological sector. The MSCI Developed Market Index, MSCI Global Index and MSCI Emerging Markets Index rose by 4.5 per cent, 4.2 per cent and 2.4 per cent, respectively. The US stocks were particularly bullish as US economic recovery gathered momentum amid the deployment of further fiscal stimulus package. The NASDAQ, S&P 500 and Dow Jones increased by 5.4 per cent, 5.2 per cent and 2.7 per cent, respectively. Likewise, the FTSE100, CAC40 and DAX registered gains of 3.8 per cent, 3.3 per cent and 0.8 per cent, respectively. The Nikkei 225 fell by 1.3 per cent as Japan registered a further rise in COVID-19 cases during April 2021. The Hang Seng, JALSH and Shanghai Exchange were up by 1.2 per cent, 0.7 per cent and 0.1 per cent, respectively, while Bombay Sensex lost 1.5 per cent during the month.

Global oil prices declined marginally in April 2021, partly due to the easing of output cuts by OPEC members as global oil demand remained stable. The ICE Brent averaged US\$65.3 a barrel in April 2021, down by 0.6 per cent from US\$65.7 a barrel in March 2021, while the NYMEX WTI fell by 1.0 per cent from an average of US\$62.4 a barrel to US\$61.7 a barrel over the same period.

International food prices, as measured by the FAO Food Price Index (FFPI), rose further in April 2021, reaching their highest levels since May 2014. The FFPI averaged 120.9 points in April 2021 compared to 118.9 points in March 2021. Year-on-year, the overall FFPI increased by 30.8 per cent, largely reflecting upward price pressures in vegetable oils, cereals, sugar and dairy products.

@ For the period 2010 to 2014, government finance statistics were compiled on a calendar year basis, spanning from January to December. As from 2015, the financial year for government finance statistics spanned from July to June of the following year. As from 2008-09, government finance statistics are compiled using the IMF's GFS Manual 2001.

Note: Following IMF recommendations in January 2013 and with effect from January 2010, liabilities to Central Government now include deposits of budgetary central government, extra-budgetary units and social security funds, as well as their holdings of Bank of Mauritius securities, which were formerly classified as "Deposits and Securities Other than Shares, Excluded from Monetary Base".

As from 2009, data refer to end-December, instead of end-June for previous years.

¹ The Central Bank Survey (CBS) is derived from the sectoral balance sheet of the Bank of Mauritius. The CBS contains data on all components of the monetary base, which comprises the central bank liabilities underlying the monetary aggregates of the economy. The monetary base comprises all bank notes and coins in circulation and deposits of banks, non-bank deposit-taking institutions and other non-depository corporations with the Bank of Mauritius.

² Following IMF recommendations in January 2013, with effect from January 2010, liabilities to Central Government now include deposits of budgetary central government, extra-budgetary units and social security funds, as well as their holdings of Bank of Mauritius securities, which were formerly classified as "Deposits and Securities Other than Shares, Excluded from Monetary Base".

¹ The sectoral balance sheet contains the stock data for all categories of assets and liabilities of banks, based on the concepts and principles of the IMF's Monetary and Financial Statistics Manual and Compilation Guide (2016).² Savings deposits, which are mostly transferable in nature, are classified under transferable deposits.

By definition, transferable deposits comprise all deposits that are (1) exchangeable for banknotes and coins on demand at par and without penalty or restriction; and (2) directly usable for making third-party payments.

³ Other deposits include non transferable savings deposits, time deposits and restricted deposits.⁴ Provisional.

[^] Data have been revised from October 2018 to December 2019.¹ The Other Depository Corporations (ODC) covers all institutional units, i.e., banks and non-bank deposit taking institutions that issue liabilities included in the national definition of broad money. The Other Depository Corporation Survey (ODCS) is derived from the sectoral balance sheets of Other Depository Corporations.² Savings deposits, which are mostly transferable in nature, are classified under transferable deposits. By definition, transferable deposits comprise all deposits that are (1) exchangeable for banknotes and coins on demand at par and without penalty or restriction; and (2) directly usable for making third-party payments.³ Other deposits include non transferable savings deposits, time deposits and restricted deposits.⁴ Provisional.

Note: With the emergence of new types of economic activities, the return on sectorwise distribution of credit to the private sector has been replaced by a new template based on the United Nations International Standard Industrial Classification (ISIC) of economic activities, built on a set of internationally agreed concepts, definitions, principles and classification rules.

The new return (PSC0100) provides details on loans disbursed by banks to other nonfinancial corporations, households and other sectors. Data reported in PSC0100 is based on the accrual accounting concept, in line with the IMF's Monetary and Financial Statistics Manual.

Please refer to the *communiqué* in the Bank's Monthly Statistical Bulletin for October 2018 available at https://www.bom.mu/sites/default/files/pdf/Research_and_Publications/Monthly_Statistical_Bulletin/msb_oct18_2.pdf.

¹ Bank loans include only facilities provided by banks in the form of loans, overdrafts and finance leases. Hence, data are not strictly comparable with those prior to October 2018.

² MUR refers to Mauritian Rupees.

³ FCY refers to the rupee equivalent of loans in foreign currency.

Note: With the emergence of new types of economic activities, the return on sectorwise distribution of credit to the private sector has been replaced by a new template based on the United Nations International Standard Industrial Classification (ISIC) of all economic activities, Rev. 4, built on a set of internationally agreed concepts, definitions, principles and classification rules. The new banking return (PSC0100) provides details on loans disbursed by banks to other nonfinancial corporations, households and other sectors. The data reported in PSC0100 is based on the accrual accounting concept, in line with the IMF's Monetary and Financial Statistics Manual (2000).

Please refer to the related communique in the Bank's Monthly Statistical Bulletin for October 2018 available at https://www.bom.mu/sites/default/files/pdf/Research_and_Publications/Monthly_Statistical_Bulletin/msb_oct18_2.pdf.

¹ Bank loans include only facilities provided by banks in the form of loans, overdrafts and finance leases. Hence, the data are not strictly comparable with those prior to October 2018.

Notes:

¹ With effect from the maintenance period starting 13 March 2020, the average fortnightly CRR on rupee deposits is reduced from 9.0 per cent to 8.0 per cent, while the average fortnightly CRR on foreign currency deposits remained unchanged at 6.0 per cent.

² The deposit base is lagged by two weeks.

³ Cash balances consist exclusively of balances held by banks with the Bank of Mauritius.

⁴ It is to be noted that banks' foreign currency excess reserves increased as from November 2017 in line with the implementation of the Liquidity Coverage Ratio (LCR), which represents a standard that is designed to ensure that a bank has an adequate inventory of unencumbered high quality liquid assets (HQLA). The HQLA consists of cash or assets convertible into cash at little or no loss of value in market, to meet its liquidity requirements for a 30 days' liquidity stress period. Banks keep part of their HQLA with the Bank of Mauritius.

⁵ Provisional.

* As from December 2017, the measurement of credit concentration ratio has been revised to aggregate large credit exposure (above 10 per cent of Tier 1 capital) as a percentage of aggregate Tier 1 capital. Based on previous Guideline, the corresponding ratio for large exposures would have been 171.8 per cent for the quarter ended December 2017.

**Following adoption of ISIC codes for sectoral definition in October 2018, the corresponding sectoral figures have changed. Hence, data are not strictly comparable with those prior to December 2018.

Notes:

(i) The Mauritius Exchange Rate Index (MERI), which is a weighted average of bilateral exchange rates for the Mauritian rupee, is a summary measure of the rupee's movements against the currencies of its important trading partners.

(ii) The choice of currencies has been influenced by the importance of the currency distribution of trade flows of Mauritius with the rest of the world.

(iii) Two indices have been derived: MERI1 and MERI2. MERI1 is based on the currency distribution of merchandise trade, while MERI2 is based on the currency distribution of merchandise trade and tourism earnings.

(iv) The base year of the MERI is January - December 2007 = 100.

(v) An increase (decrease) in the index indicates a depreciation (appreciation) of the rupee.
