OVERVIEW

International Developments

In July 2012, the US dollar, on average, appreciated vis-à-vis the euro but depreciated against the Pound sterling and the Japanese yen. Concerns that the euro zone debt crisis was weighing on global growth bolstered safe-haven demand for the US dollar.

The euro depreciated against the US dollar in July 2012, trading at an average of US\$1.2302 compared to an average of US\$1.2549 in June 2012. The euro slumped to five-week lows against the dollar after the ECB, as expected, cut its key interest rate on 5 July 2012 - by 25 basis points to a record low of 0.75 per cent - but refrained from bolder moves such as reviving its bond-buying programme. The single currency fell to a two-year low of \$1.2067 after a meeting of euro zone finance ministers offered no positive surprise. A downgrade of Italy's credit rating and mounting fears that debt-ridden Spain would need a bailout together with the release of minutes of the Federal Reserve meeting, which dampened expectations of further U.S. monetary easing in the near term, also weighed on the euro. The single currency rallied at the end of the month after comments from ECB chief Mario Draghi boosted hopes of more steps to tackle the debt crisis.

The Pound sterling appreciated slightly against the US dollar in July 2012, trading at an average of US\$1.5593 compared to an average of US\$1.5552 in June 2012. Sterling got some support from safe-haven demand from investors concerned about the debt crisis and slowing global growth even as it was undermined by growing evidence of a weakening economy that could prompt further monetary easing by the Bank of England.

Global equities gained in July 2012. The major stock markets, with the exception of some Asian markets, posted gains as expectations for more monetary stimulus and forecast-beating corporate results outweighed worries about the debt crisis and sluggish global growth. Over the month, the Dow Jones Industrial Average, NASDAQ, FTSE, CAC-40 rose by 1.0 per cent, 0.2 per cent, 1.2 per cent and 3.0 per

cent, respectively, while the Nikkei dropped by 3.5 per cent. Among emerging stock markets, Shanghai SEC and Bombay SENSEX lost 5.5 per cent and 1.1 per cent respectively, while JALSH added 2.6 per cent.

NYMEX WTI (West Texas Intermediate crude oil) averaged US\$87.9 a barrel in July 2012, up from US\$82.4 a barrel in June 2012. ICE Brent Crude averaged US\$102.7 a barrel during the month under review, up from US\$95.9 a barrel in June 2012. Both NYMEX and ICE Brent Crude settled at intra-month highs of US\$92.7 a barrel and US\$ 107.8 a barrel, respectively, on 19 July 2012.

COMEX gold futures, on average, went down from US\$1,601.9/Oz in June 2012 to US\$1,593.1/Oz in July 2012 and traded in an intra-month closing range of US\$1,565.3/Oz-1,621.8/Oz compared to US\$1,550.4/Oz-1,634.2/Oz in the preceding month. Gold prices peaked at US\$1,621.8/Oz on 03 July 2012.

Announcement of the First Disbursement under the Special Line of Credit in Foreign Currency

The persistence of the Eurozone crisis, worsening external market conditions facing Mauritian exporters, and the continued depreciation of certain currencies, have been triggering alert signals for our export enterprises. The Bank of Mauritius (the Bank) is concerned that economic operators may be affected by the mismatch between the currencies in which **their** earnings are denominated and their outstanding debt in rupees, which may lead to debt servicing difficulties with adverse effects on the balance sheet of operators and their creditors, namely domestic banks.

On 9 June 2012, the Bank offered a Special Line of Credit in Foreign Currency to the tune of 600 million euros to be drawn in the three major currencies, namely USD, EUR or GBP, at the option of the borrowers, in the export and tourism sectors, through their respective banks.

Following representations made by banks and operators in the export and tourism sectors, the Bank proceeded with a softening of the terms and conditions of the Special Line of Credit in Foreign Currency. Specifically, banks can now draw funds at 6-month LIBOR + 100 basis points for loans with a maturity of 1 year and above, and 6-month LIBOR + 75 basis points for loans with tenors of less than a year. Banks can on-lend to their clients at a maximum of 200 basis points above the cost of funds from the Bank.

The Bank is pleased to announce that it signed today an Agreement with the Mauritius Post and Cooperative Bank Ltd (MPCB Ltd) and disbursed funds for on-lending to an economic operator in the tourism sector. MPCB Ltd thus becomes the first bank to draw under this facility.

At the Signature Ceremony this morning, Mr Rundheersing Bheenick, Governor, Bank of Mauritius, said: "*The Bank is well on its way to increasing its reserves since it announced the Operation Reserves Reconstitution (ORR) in June... The Bank was never in the market to provoke an uncontrolled slide of the rupee. Instead it had a controlled approach to it and the Bank is happy to note that since the announcement of the ORR, the rupee has adjusted by around 4 per cent in terms of its exchange rate index... The Consumer Price Index figures coming out up to now show that there has been no direct inflationary impact from this controlled slide of 4 per cent.*"

[#] : The definition of GIR meets the IMF's BPM6 definition of reserves. Reserves are defined as external assets that are readily available to and controlled by monetary authorities. Hence, GIR excludes the Bank's foreign equity participation in international organisations as this does not meet the criteria of readily available reserves.

¹ Valued at end-of-period exchange rate.

² In line with the recommendation of the IMF Article IV Mission of January 2012, import cover is no longer computed on imports of goods, cif but based on imports of goods, fob and non-factor services. For further information, please refer to the methodological note that has been released on the Bank's website in its March 2012 Monthly Statistical Bulletin Issue.

Notes:

- (i) The Mauritius Exchange Rate Index (MERI), which is a weighted average of bilateral exchange rates for the Mauritian rupee, is a summary measure of the rupee's movements against the currencies of its important trading partners.
- (ii) The choice of currencies has been influenced by the importance of the currency distribution of trade flows of Mauritius with the rest of the world.
- (iii) Two indices have been derived: MERI1 and MERI2. MERI1 is based on the currency distribution of merchandise trade, while MERI2 is based on the currency distribution of merchandise trade and tourism earnings.
- (iv) The base year of the MERI is January - December 2007 = 100.
- (v) An increase (decrease) in the index indicates a depreciation (appreciation) of the rupee.
